SECTION I

INTRODUCTION

Scope

This manual lists repair parts required for the performance of organizational maintenance of the equipment.

General

The Repair Parts List is arranged as follows:

1) Individual parts and major assemblies are listed alphabetically by item name within the numerical functional groups.

2) Assembly components and subassemblies are listed and listed alphabetically by item name under their assemblies.

This Repair Parts and Special Tools List is divided into the following sections:

1) *Prescribed Load Allowance (PLA)*—Section I. A consolidated listing of repair parts quantitatively required for initial stockage at the organizational level. This is a mandatory stockage allowance.

2) *Special Tools, Test and Support Equipment*—Section III. A list of special tools, test and support equipment authorized for the performance of maintenance at the organizational level. (Not Applicable)

3) *Repair Parts*—Section IV. A list of repair parts authorized for the performance of maintenance at the organizational level.

4) *Federal Stock Number and Reference Number Index*—Section V. A list of Federal stock numbers indexed by reference numbers in ascending alphanumeric sequence, cross-referenced to index number.

Explanation of Columns

The following provides an explanation of columns in the tabular data in section II, III, and IV:

Source, Maintenance and Recoverability Codes (See Table 1).

1. Common hardware items known to be readily

Code

Exp

M Applied to repair parts stocked but are to be maintained in maintenance categories.

A Applied to assemblies stocked as such but are units, each of which can be assembled by units and descriptions and can be assembled by units categories.

X Applied to parts and assemblies stocked, the maintenance level below that of the applicable item of which should be used to end item from the supply.

X1 Applied to repair parts stocked, the requirement by use of the next higher maintenance level.

X2 Applied to repair parts indicated maintenance level. If such repair parts will attempt to be obtained; if not obtainable, such repair parts supporting justification for such parts.

C Applied to repair parts assemblies. If not obtainable, such repair parts will be obtained through normal supply channels of nonavailability from the supply.

G Applied to major assemblies PEMA (Procurement Management) funds for initial issue of assemblies at DSU and GSU. These assemblies will not be GSU or returned to depot.

(2) Maintenance code category of maintenance authorized for the item. The maintenance level is the maintenance level.

Code

Exp

O Organizational maintenance

critical materials, high dollar value recasings or castings.

column also lists, below the SMR code, number for each item in ascending numerical order which is used to locate items in the publication. The Federal stock number and/or reference number is known.

Stock Number. This column indicates the stock number for the item.

Description. This column indicates the Federal stock number and any additional description of the item. The part number or other reference number is given by the applicable five-digit Federal supply number in parentheses. Material manufacturer or fabrication is identified.

Issue. This column indicates the unit of issue, e.g., ea, pr, ft, yd, etc.

Quantity Incorporated in Unit Pack. This column indicates the actual quantity contained in the unit.

Quantity Incorporated in Unit. This column indicates the quantity of the item used in the functional unit.

Day Organizational Maintenance Allowance

The allowance columns are divided into four subcolumns as indicated in each subcolumn opposite the description of each item is the total quantity of items needed for the number of equipments supported. Subsequent appearances of the same item in the allowance columns but will be identified in the description column a reference to the description of the item. Items authorized for repair but not for initial stockage are identified by an asterisk in the allowance column.

The quantitative allowances for organizational maintenance represents one initial prescribed maintenance period for the number of equipments supported and organizations authorized authorized loads will multiply the number of items authorized by the quantity of repair items authorized in the appropriate density column to obtain the number of items supported to obtain

(4) Subsequent changes to allowances are limited as follows: No change in the allowances is authorized. If additional items are considered necessary, recommendation should be forwarded to the Army Mobility Equipment Command for revision to the allowance list. Revisions of items authorized will be made by the command based upon engineering experience, design changes, and TAERS information.

h. Illustration. This column is divided into two parts:

(1) **Figure number.** Indicates the number of the illustration in which the item is shown.

(2) **Item number.** Indicates the number used to reference the item in the illustration.

4. Special Information

a. Repair parts mortality has been determined in hours of operation per year.

b. Parts which require manufacture at a category higher than that authorized in the allowance list will indicate in the source column the category.

c. The following publications pertain to the allowance and its components:

TM 5-2420-218-15	Organization and Depot Maintenance Manual
TM 5-2420-218-35P	Direct and Indirect Support and Maintenance Requirements and Specifications
LO 5-2420-218-12-1-2	Lubrication

The illustrations in this manual are identical to those published in the -35P. The -35P illustrations are for a better understanding of the parts and assemblies; however, only those parts assigned a maintenance "O" are listed in the tabular portion of the manual. Parts are authorized for requisitioning in the manual.

5. How to Locate Repair Parts

pair part belongs. This will refer to a page in the parts listing.

(2) *Second.* The illustration column of the page refers to a figure number.

(3) *Third.* Locate the figure and identify the pair parts, noting the item number.

(4) *Fourth.* Refer back to the page of the parts listing. Find the item number in the illustration column that corresponds with the figure number.

b. When Federal Stock number or reference number is known:

(1) *First.* Using the Index of Federal Stock Numbers and Reference Numbers, find the pertinent federal stock number or reference number. This index is in ascending alphanumeric sequence cross-referenced to an index number.

(2) *Second.* Using the Repair Part Listing, find the index number referenced in the Index of Federal Stock Numbers and Reference Numbers.
